Excursions

Excursion 1:

„About Coal and Miners“ - Denkmalpfad ZOLLVEREIN

Guided Walk by: Kerstin Teichmann / Stiftung Zollverein

The path leads through Zollverein Shaft XII's authentically preserved surface installations. Apart from the impressive 'New Objective' architecture, you discover the technology and work at the loveliest and formerly largest and most productive coal mine in the world. From the shaft hall, where the coal arrived, you follow the coal on its travels through the screening plant, where the coal was pre-screened, to its preparation and loading is the scrubbing plant. At the same time you discover the traces of miners and get to know their ways of life and conditions of work. Outside the plant you find out interesting facts about Zollverein's architecture, nature and its multifaceted process of transformation from mine to modern site of art.

Capacity: 60 Persons

Excursion 2:

„Renaturalization of the River Emscher - The blue and green backbone of the Region“

Guided Bustour by: Emschergenossenschaft

The decline of the predominant mining and steel industries forced the cities of Europe's third largest urban agglomeration to search for new perspectives. Anyhow the attempt to attract new clean industries required an appealing surrounding, a certain quality of life. Under its former monostructural hegemony always regarded as the Germany's shady workbench, the region had no other choice than to perform a fundamental transformation. The Emscher stream system displays this regional metamorphosis perfectly: once degraded to an open sewage system, it is now determined to play a crucial role in the establishment of a new urban quality. In connection with its surrounding green areas the restored river shall offer regional solutions to the present and future challenges of the conurbation. The cities' unsightly back yard turns into a representative front garden, improving a regional quality of life. Additionally the newly established green infrastructure helps the cities to develop resilience in view of the predicted effects of climatic change.

Capacity: 50 Persons

Excursion 3:

„Emscher Landscape Park – Post industrial design for urban landscapes“

Guided Bustour by: Regionalverband Ruhr

The excursion „Emscher Landscape Park – Post industrial design for urban landscapes“ gives an overview to different examples of new urban parks and landscapes created in the last 25 years. It includes the transformation of former coal mining and steel sites like Lake Phoenix (Dortmund), WestPark (Bochum), ERIN & Hoppenbruch (Herten), the Landscape Park Duisburg-North and finally the Rhine-Park in Duisburg. The single projects are important parts of the regional parksystem: Emscher Landscape Park.

Capacity: 50 Persons
